

New Book: "ECONOMIC AND TECHNOLOGICAL DIMENSIONS OF NATIONAL INNOVATION SYSTEMS"

A new book "ECONOMIC AND TECHNOLOGICAL DIMENSIONS OF NATIONAL INNOVATION SYSTEMS" has been published, edited by Walter Leal Filho (TuTech, Hamburg) and Marzena Weresa from Warsaw School of Economics in Poland.

This book, which is the result of a specialist workshop co-organised by TuTech Innovation (Hamburg, Germany) and the Warsaw School of Economics held in Warsaw, Poland in early 2005, was prepared as part of the project L-NET (European Learning Network). It looks at the subject matter of innovation in Europe under a number of perspectives. It is aimed at contributing to the debate on the implementation of innovation policies and actions plans in Europe, by undertaking two main tasks. The first is to take an overall look at the state of the art of innovation in Europe. More specifically, by providing an overview of the implications of national innovation systems and policies in the European Union, linking economics and technology in an innovation context. The second task the book set itself was the description of trends on innovation in various European countries and regions.

This book and the various matters it deals with, will provide helpful insights to all those researching an analysing the means to deliver innovation in European countries. Moreover, this publication is meant to pave the way for more concrete ways to deliver innovation at the level they matter most: the local level.

Due to its nature and international scope, this publication is of special interest to educators, scientists and researchers working in the innovation sector. It also provides useful insights to politicians and other academics interested in innovation issues in the new EU member countries.

The details on the book are:
